✈ Travel Memory Tracker

Project Plan & UX Artefacts

Laravel MVC Web Application

This document outlines the planning and UX design for the Travel Memory Tracker web application. It demonstrates how the system is structured, the intended users, and the overall scope before development begins, following a Laravel MVC approach.

---

1. Project Concept and Problem Statement

The project is a travel memory tracking web application designed to help users store and organise memories from their trips and holidays.

Currently, people often rely on scattered photos or notes across different apps, making it difficult to revisit and organise travel experiences. This project aims to provide a simple, structured, and user-friendly platform where users can create trips, add memories, and view them in one place.

The system will also include a memory story feature that generates a summary of completed trips, combining photos and notes into a more engaging experience similar to digital memory recaps.

2. User Personas

Persona 1: Primary User

Name: Sarah Smith

Age: 23

Location: Dublin, Ireland

Job: College Student

Bio

Sarah is a college student who enjoys travelling during holidays and weekends. She takes a lot of photos and likes documenting her experiences but finds it hard to keep everything organised across different apps.

Personality: Organised, creative, detail-oriented

Technology: Comfortable with apps, social media, and basic web platforms

Goals	Frustrations	Motivations
• Keep all travel memories in one place	• Photos scattered across phone and apps	• Enjoys reliving travel experiences
• Easily organise trips and photos	• Hard to remember details of trips	• Wants a clean and organised system
• Look back on past holidays	• No simple way to organise memories	• Likes visually appealing apps

Behaviours
• Takes photos frequently while travelling
• Adds notes or captions to memories
• Logs into apps regularly to update content
• Revisits past trips for memories or inspiration

"I want one place where I can keep all my travel memories without it being messy."

Persona 2: Secondary User

Name: Mark Byrne

Age: 28

Location: Louth, Ireland

Job: Office Worker

Bio

Mark travels occasionally for holidays and weekends. He doesn't document everything but likes to keep a simple record of trips and revisit memories from time to time.

Personality: Practical, straightforward, low-maintenance

Technology: Moderate – uses everyday apps but prefers simplicity

Goals	Frustrations	Motivations
• Quickly save trip details	• Doesn't want complicated apps	• Wants convenience
• Easily view past trips	• Forgetting places he visited	• Likes simple and clean design
• Keep things simple and easy	• Too many steps to add information	• Prefers quick interactions

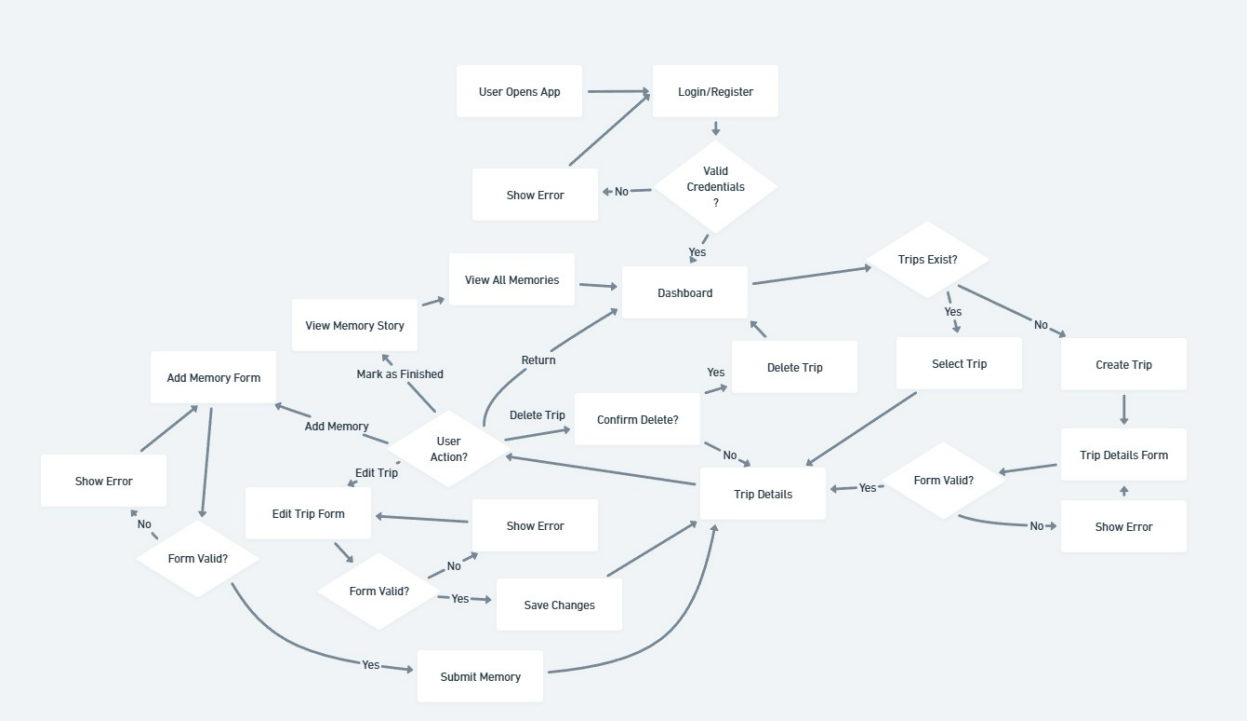
Behaviours
• Logs in occasionally rather than daily
• Adds basic trip details after returning from trips
• Browses past trips rather than constantly updating
• Avoids features that feel complicated

"I just want something quick and easy to track my trips."

3. User Flows / Task Journeys

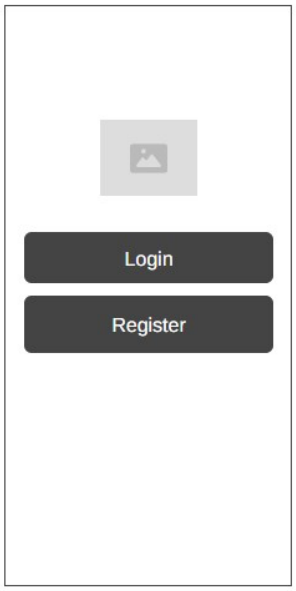
Traveller Flow

Register or Login	Access Dashboard	Create New Trip	Enter Trip Details	Add Memories	View Trip Details	Edit / Delete Content	Mark Trip Finished	View Memory Story

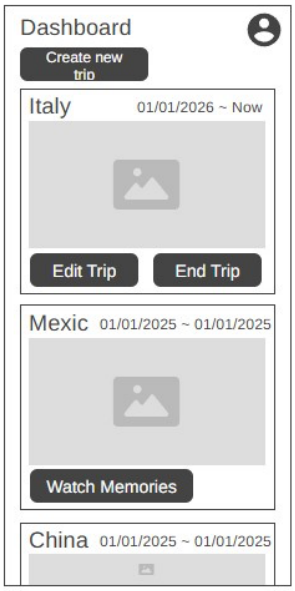


4. Low-Fidelity Wireframes

The wireframes below show the initial layout concepts for the key pages of the application.

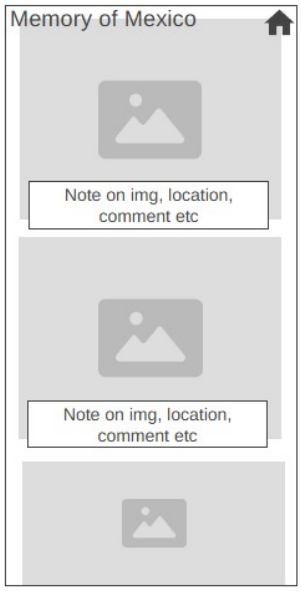


Login / Register



Dashboard / Main

Edit / Add Page



Memories Page

5. Project Scope

✓ Included Features	✗ Excluded Features
• User authentication (registration and login)	• Social sharing or public profiles
• CRUD functionality for trips (main feature)	• Real-time notifications
• Ability to add and manage memories within trips	• Advanced analytics
• Memory story page for completed trips	• Interactive maps or location tracking
• Form validation and error handling	
• Dashboard to view all trips
